PROFESSIONAL SUMMARY

Full Stack Developer with a strong foundation in modern web technologies (Golang, Nuxt.js, React) and Data Analytics. Proven experience in building scalable enterprise solutions, ranging from Port Management Systems to Order Management dashboards. Adept at bridging the gap between complex backend logic and user-friendly frontend interfaces. Passionate about Software Architecture, optimizing database performance, and delivering high-quality, maintainable code.

TECHNICAL SKILLS

- Frontend Development: React.js, Next.js, Nuxt.js, TypeScript, JavaScript (ES6+), Tailwind CSS, Bootstrap, Chart.js, HTML5/CSS3, Figma.
- Backend Development: Go (Gin), Node.js (Express, Hono), Bun, Python, RESTful APIs, Swagger/OpenAPI, Kafka, Redis, LINE Messaging API.
- Security&Architecture: JWT authentication (refresh-token rotation), RBAC and multi-tenant authorization, rate limiting, event-driven microservices, background job workers.
- Database Management: PostgreSQL, MySQL, MongoDB, Prisma, GORM, schema design, query optimization.
- Data Analysis & Tools: SQL, Python (Pandas/NumPy), R, Looker Studio, Tableau, SAP Crystal Reports.
- DevOps&Testing:Git (GitHub/GitLab), GitLab CI/CD, Docker, Kubernetes, Microsoft Azure, MinIO, Postman, unit and integration testing.

WORK EXPERIENCE

Full Stack Developer | TCC TECHNOLOGY CO., LTD. — Mar 2026 – Present

Crystal Blue Space (LINE Official Account): TypeScript backend (Bun, Hono, Prisma, MongoDB) for a LINE OA loyalty and campaign platform.

- Rich Menu Linking API: Built an internal API that links LINE rich menus to selected users or to every follower. Each request is logged to an audit trail, and large requests go to a background job with a progress-tracking endpoint.
- Resilient Background Worker: Designed a job worker that claims jobs with lease-based locking, resumes from a cursor after a restart, and releases its lease cleanly during rolling deploys. It sends LINE bulk-link calls in batches with exponential backoff on 429/5xx and stops early on a token or rich menu error (401/403/404).
- Config-Free Campaign Rollout: Moved rich menu selection from environment variables into a scheduled MongoDB settings collection, so a new campaign no longer needs a config change and redeploy. Lookups are cached per pod and fall back to env values if the database is unavailable, so login and registration keep working.
- Follower State Sync: Resolved unknown follow status through the LINE Profile API and kept it in sync from follow/unfollow webhooks, so bulk updates only reach users who still follow the account.

Sustaina Site Management System: Backend services and APIs for a sustainability (ESG) tracking and reporting platform.

- Authentication & Security: Built refresh-token rotation with reuse detection, session revocation, a Redis-backed rate limiter, and a cleanup worker for expired tokens.
- Event-Driven Services: Built a Kafka consumer that syncs questionnaire revisions and unit changes across microservices, carrying ESG records into new revisions without data loss.
- Data & Access Control: Owned the XLSX import/export pipeline (validation, units, number formatting) and enforced tenant- and role-based authorization on data-entry routes.

SX Expo Platform: Go (Gin) backend for the Sustainability Expo mobile app and admin console.

- Loyalty Points Integration: Upgraded the third-party points API integration to v1.13 with unified error handling, idempotency keys, and an atomic account upsert to prevent race conditions.
- Performance & Observability: Sped up the admin points lookup with parallel calls and caching, and added request logging that masks sensitive fields.

Full Stack Developer | WISDOM VAST COMPANY LIMITED. **Sep 2025 – Feb 2026**

- Port Management System (PMIS): Spearheaded the development of a ship docking and toll collection system using Golang and Nuxt.js. Optimized complex SQL queries for daily reporting and implemented secure API endpoints for Map Ta Phut Port.
- Database Migration (v3 to v4): Engineered a strategic migration plan, resolving complex schema discrepancies to ensure 100% data integrity between legacy and modern architectures.
- Legacy Maintenance: Utilized DnSpy to reverse-engineer C#/.NET modules and maintained SAP Crystal Reports to support financial operations.
- Mula Platform: Managed full-stack development for Master Page modules, ensuring synchronization between frontend and backend.

Frontend Developer | KDR TRANSPORT COMPANY LIMITED. **Aug 2024 – Aug 2025**

- Order Management System (OMS): Built a responsive dashboard using React.js and Tailwind CSS to visualize real-time data via Chart.js. Integrated with internal ERP APIs to streamline logistics operations and display live order statuses.
- IT Equipment System: Developed a full-stack Borrow-Return application using Next.js (TypeScript) and MySQL. Implemented features for inventory tracking, transaction history, and automated contract generation (PDF).
- ERP Modernization: Revamped legacy interfaces for Legal and Recruitment departments, creating custom workflows that significantly improved user usability and document management efficiency.

EDUCATION

Bachelor of Business Administration
(B.B.A.)Rajamangala University of Technology Rattanakosin (RMUTR) | Graduated 2024

- Major: Multimedia Technology
- Relevant Coursework: Web Programming, Database System Design, System Analysis and Design.

CERTIFICATIONS & TRAINING

Certified Professional Data AnalystDataRockie School | Issued May 2025

- Comprehensive 6-month Data Science Bootcamp (Batch 11) with over 100 learning hours.
- Skills Validated: Advanced SQL, Python for Data Science, R, Data Transformation, Visualization, and Intro to Machine Learning.
- Capstone Project: Created interactive dashboards using Looker Studio and Tableau Public to analyze business trends.

Full Stack Web Development BootcampTechUp | Issued Aug 2024

- Intensive practical training in MERN Stack (MongoDB, Express, React, Node.js).
- Built "Courseflow," a fully functional e-learning platform with authentication and CRUD capabilities.

Cloud Essential and Cloud Migration with Microsoft Azure by Microsoft & AIS Academy | Issued March 2026

- Covered cloud fundamentals, Azure services, and cloud migration strategies for enterprise workloads.
- Skills Validated: Cloud Computing, Microsoft Azure, Cloud Migration, and Infrastructure as a Service (IaaS).
